### SLABMASTERS

Letsunyane Consulting engineers PE has been appointed to oversee the construction of 950 human settlement house in Joe Slovo Township in the Nelson Mandela Bay Metro. Slabmasters was appointed by Verern Builders and Contractors to do the raft foundations for their section of the project.

The production of Slabmasters was excellent. The speed at which they produced slabs for Verern was unparalleled when compared to the other contractors involved in the project. They furthermore never had any defects in their slabs and continuously liaised with us to arrange inspections prior to casting. We could never find any discrepancies in terms of their adherence to specifications. This ensured a high quality product that met and mostly exceeded specifications. They also proposed a design for plots where a great deal of filling had to be done due to the slope of the ground. The proposal was fine tuned by us and authorised for execution. Upon inspection we once again found that they had exceeded the specifications as issued by us.

We can recommend Slabmasters for the production of raft foundations and will not hesitate to recommend them for similar jobs

Yours faithfully
